

grimpp

Our mission

- Promote scientific research on modelling applied to plant protection.
- Organise knowledge exchanges on methodological approaches, developments, and applications of models among researchers, in synergy with various end-users.
- Promote the coordination and integration of activities carried out by those working in the sector in Italy.
- Strengthen relations with initiatives and working groups operating in the same field in other countries.
- Gather available knowledge on modelling at both the Italian and international levels and promote its dissemination.
- Support training activities in the sector
- Raise awareness and engage public administrations and private entities in the rational development and use of models.

Italian Research Group on Plant Protection Models

grimpp

It was established in Bologna on 26 September 2007 as a natural evolution of the experience gained in the design and development of the conferences "Numerical, Statistical and IT Methods in the protection of agricultural crops and forests", held in Sassari (1999), Pisa (2002), Florence (2004), and Viterbo (2007).

Activities

- Activation of study groups
- Development of research programmes
- Organisation of conferences and seminars
- Training and dissemination at various levels: organisation and/or promotion of courses for researchers, technicians, and end-users
- Promotion of contacts and collaboration with public and private entities at both national and international levels.
